MINI X-RAY

The Dowry

thedowry.com · Fort Worth, Texas. Your store seen the way a shopper sees it on a phone.

Your homepage in our phone test

58/100

Four areas, 25 points each. Speed is where the most points are left.

Speed 9/25

Lighthouse speed score 26–36 out of 100 in our three runs; the main image showed after 7.7–21 seconds.

SEO 21/25

8 of 10 Lighthouse SEO checks pass; some links only say things like “click here”; some links can't be followed by Google.

Menu 11/25

100 links once the dropdowns open: a long scroll on a phone.

Support 17/25

Chat (Shopify Inbox) is there for questions, but the product page we checked shows no customer reviews.

The 3 fixes we'd make first

1 The homepage is slow to show its main image

Most shoppers find you on a phone. While the first screen is still loading, some of them tap back to the search results and pick another store.

7.7–21 s
main image on a phone

2 The menu is a long scroll on a phone

A shopper who can't spot their category in a few seconds tends to leave. A shorter menu gets more people onto product pages, where buying starts.

100
links in the menu

3 Product pages don't show customer reviews

First-time visitors don't know your store yet. Reviews from other buyers are the quickest proof that a product is what it looks like, so fewer people leave to look for that proof elsewhere.

No reviews
on the product page we checked

THE 3 FIXES, IN DETAIL

1 The homepage is slow to show its main image

WHAT WE SAW On a phone, your homepage took about 8 seconds to show its main image in our test. Google rates anything over 4 seconds as poor. Across three test runs it ranged from 7.7 to 21 seconds. The largest thing on the first screen is a slide in a rotating banner.

WHAT TO DO Swap the rotating banner for one image sized for phones and load it first, then go through the 23 outside services that load on the homepage, remove the ones you no longer use and load the rest after the page appears.

7.7–21 s main image on a phone	**5.4–5.5 MB** homepage download
491–494 requests on the homepage	**23** outside services

2 The menu is a long scroll on a phone

WHAT WE SAW The main menu has 100 links once the dropdowns open. On a phone, that's a long scroll before anyone reaches a product. We counted the links in the header menu with its dropdowns open, leaving out social icons.

WHAT TO DO Keep 5 to 7 top-level items that match how people shop (categories, best sellers, gifts) and move the long lists into collection pages with filters. Keep search one tap away.

100 links in the menu	**1,108** products in the store

3 Product pages don't show customer reviews

WHAT WE SAW We didn't see customer reviews on your product pages. For a first-time visitor, reviews are the quickest proof. We looked for a review widget, star ratings and review counts on the homepage and a product page after they fully loaded on a phone.

WHAT TO DO Turn on a reviews app, ask recent buyers for a review by email a few days after delivery, and show the star rating next to the price.

None reviews or stars on the product page we checked

What's already working

- **Alt text on every homepage image.** Good for Google and for screen readers.
- **A page that holds still.** Layout shift 0.00, under Google's 0.1 limit: nothing jumps under the thumb.
- **A title and description for Google.** The homepage has both, so search results read well.

How we measured. Google Lighthouse 12.8.2 in mobile mode (a simulated mid-range phone on slow 4G): three runs on the homepage on November 3, 2026. Menu links counted from the homepage code; chat and reviews checked on the homepage and a product page in Chrome at 390 pixels wide, November 3, 2026; sitemap read November 3, 2026. Load times vary between runs, so we show ranges and score the better run. Speed = Lighthouse performance × 0.25; SEO = Lighthouse SEO × 0.25; Menu and Support start at 25 and lose points only for the gaps named above.
