MINI X-RAY

Mixology & Co.

mixology-cocktails.com · Fort Lauderdale, Florida. Your store seen the way a shopper sees it on a phone.

Your homepage in our phone test

68/100

Four areas, 25 points each. Speed is where the most points are left.

Speed 7/25

Lighthouse speed score 26–29 out of 100 in our two runs; the main image showed after 24–32 seconds.

SEO 23/25

9 of 10 Lighthouse SEO checks pass; some images have no alt text.

Menu 25/25

We couldn't count the menu links automatically, so no points are taken off.

Support 13/25

No chat or assistant on mobile, so questions wait for an email reply.

The 3 fixes we'd make first

1 The homepage is slow to show its main image

Most shoppers find you on a phone. While the first screen is still loading, some of them tap back to the search results and pick another store.

24–32 s
main image on a phone

2 Quick questions have nowhere to go

A question that waits for an email reply is a sale on hold, and many shoppers move on while they wait. An answer in the moment keeps them on the page.

No chat
on the pages we checked

3 The homepage is heavy for a phone

Everything on the page has to come down a phone connection before it settles. A lighter page shows products sooner and uses less of the shopper's data.

12.3–12.7 MB
homepage download

THE 3 FIXES, IN DETAIL

1 The homepage is slow to show its main image

WHAT WE SAW On a phone, your homepage took about 24 seconds to show its main image in our test. Google rates anything over 4 seconds as poor. Across two test runs it ranged from 24 to 32 seconds.

WHAT TO DO Size the main image for phones and load it first, then go through the 12 outside services that load on the homepage, remove the ones you no longer use and load the rest after the page appears.

24–32 s main image on a phone

26–29 Lighthouse speed score, out of 100

375–496 requests on the homepage

12 outside services

2 Quick questions have nowhere to go

WHAT WE SAW We didn't find a chat or assistant on mobile, so a shopper with a quick question about shipping or a product has to email and wait. We checked the homepage and a product page on a phone-sized screen (390 pixels wide), scrolled to the bottom.

WHAT TO DO Add a chat that answers from your own shipping, returns and product pages, day and night, and passes anything else to your team by email. Start with the questions you already get most.

None chat or assistant on the homepage or product page

3 The homepage is heavy for a phone

WHAT WE SAW The homepage downloads about 12 MB on a phone, most of it images that could be much lighter. In our runs the homepage was 12.3 to 12.7 MB over 375 to 496 requests; images were 9.3 MB of it and scripts 2.1 MB.

WHAT TO DO Resize and compress the images for phones (Lighthouse estimates 2.9 MB saved on images alone), and remove app code the page downloads but doesn't use (about 0.7 MB by Lighthouse's count).

12.3–12.7 MB homepage download

9.3 MB of it images

2.1 MB of it scripts

0.7 MB of scripts unused

What's already working

- **Reviews on product pages.** The one we checked shows 1 review (Loox).
- **Product data for Google.** Product pages carry schema, so search results can show price and stock.
- **A title and description for Google.** The homepage has both, so search results read well.
- **A page that holds still.** Layout shift 0.00, under Google's 0.1 limit: nothing jumps under the thumb.

How we measured. Google Lighthouse 12.8.2 in mobile mode (a simulated mid-range phone on slow 4G): two runs on the homepage on November 3, 2026. Menu links counted from the homepage code; chat and reviews checked on the homepage and a product page in Chrome at 390 pixels wide, November 3, 2026; sitemap read November 3, 2026. Load times vary between runs, so we show ranges and score the better run. Speed = Lighthouse performance × 0.25; SEO = Lighthouse SEO × 0.25; Menu and Support start at 25 and lose points only for the gaps named above.
