MINI X-RAY

# Worth & Worth

**hatshop.com** · New York, New York. Your store seen the way a shopper sees it on a phone.

Your homepage in our phone test

## 66/100

Four areas, 25 points each. Speed is where the most points are left.

**Speed** 8/25

Lighthouse speed score 31 out of 100 in our two runs; the main content showed after 59–60 seconds.

**SEO** 20/25

8 of 10 Lighthouse SEO checks pass; some links can't be followed by Google; the robots.txt file has errors. Your sitemap also lists one page that looks like test or duplicate leftovers: /pages/returns-1.

**Menu** 25/25

8 links in the menu: short enough to scan on a phone.

**Support** 13/25

No chat or assistant on mobile, so questions wait for an email reply.

## The 3 fixes we'd make first

1 **The homepage is slow to show its main image**

Most shoppers find you on a phone. While the first screen is still loading, some of them tap back to the search results and pick another store.

59–60 s
main content on a phone

2 **Quick questions have nowhere to go**

A question that waits for an email reply is a sale on hold, and many shoppers move on while they wait. An answer in the moment keeps them on the page.

No chat
on the pages we checked

3 **The homepage is heavy for a phone**

Everything on the page has to come down a phone connection before it settles. A lighter page shows products sooner and uses less of the shopper's data.

149.5–150.0 MB
homepage download

## THE 3 FIXES, IN DETAIL

### 1 The homepage is slow to show its main image

**WHAT WE SAW** On a phone, your homepage took about 59 seconds to show its main image in our test. Google rates anything over 4 seconds as poor. Across two test runs it ranged from 59 to 60 seconds. The largest thing on the first screen is a slide in a rotating banner.

**WHAT TO DO** Swap the rotating banner for one image sized for phones and load it first, then go through the 22 outside services that load on the homepage, remove the ones you no longer use and load the rest after the page appears.

**59–60 s** main content on a phone

**31** Lighthouse speed score, out of 100

**484–485** requests on the homepage

**22** outside services

### 2 Quick questions have nowhere to go

**WHAT WE SAW** We didn't find a chat or assistant on mobile, so a shopper with a quick question about sizing or shipping has to email and wait. We checked the homepage and a product page on a phone-sized screen (390 pixels wide), scrolled to the bottom.

**WHAT TO DO** Add a chat that answers from your own shipping, returns and product pages, day and night, and passes anything else to your team by email. Start with the questions you already get most.

**None** chat or assistant on the homepage or product page

### 3 The homepage is heavy for a phone

**WHAT WE SAW** The homepage downloads about 150 MB on a phone, which is heavy on a mobile connection. In our runs the homepage was 149.5 to 150.0 MB over 484 to 485 requests; images were 15.1 MB of it and scripts 1.3 MB.

**WHAT TO DO** Resize and compress the images for phones (Lighthouse estimates 4.2 MB saved on images alone), and remove app code the page downloads but doesn't use (about 0.3 MB by Lighthouse's count).

**149.5–150.0 MB** homepage download

**15.1 MB** of it images

**1.3 MB** of it scripts

**0.3 MB** of scripts unused

## What's already working

- **Reviews on product pages.** The one we checked shows customer reviews (Loox).
- **A short menu.** 8 links, easy to scan on a phone.
- **Alt text on every homepage image.** Good for Google and for screen readers.
- **A title and description for Google.** The homepage has both, so search results read well.

**How we measured.** Google Lighthouse 12.8.2 in mobile mode (a simulated mid-range phone on slow 4G): two runs on the homepage on November 3, 2026. Menu links counted from the homepage code; chat and reviews checked on the homepage and a product page in Chrome at 390 pixels wide, November 3, 2026; sitemap read November 3, 2026. Load times vary between runs, so we show ranges and score the better run. Speed = Lighthouse performance × 0.25; SEO = Lighthouse SEO × 0.25 minus 1 per leftover page; Menu and Support start at 25 and lose points only for the gaps named above.
