MINI X-RAY

# Dippin Daisys

**dippindaisys.com** · South El Monte, California. Your store seen the way a shopper sees it on a phone.

Your homepage in our phone test

## 65/100

Four areas, 25 points each. Speed is where the most points are left.

**Speed** — 7/25

Lighthouse speed score 22–29 out of 100 in our two runs; the main image showed after 11–14 seconds.

**SEO** — 22/25

All 10 of Lighthouse's SEO checks pass on the homepage. Your sitemap also lists three pages that look like test or duplicate leftovers: /pages/a-test-page, /pages/size-chart-2, /pages/influencer-edit-1.

**Menu** — 11/25

102 links once the dropdowns open: a long scroll on a phone.

**Support** — 25/25

No gaps found: a chat tool (LiveChat) is installed, and a reviews widget shows on product pages.

## The 3 fixes we'd make first

1 **The homepage is slow to show its main image**

Most shoppers find you on a phone. While the first screen is still loading, some of them tap back to the search results and pick another store.

11–14 s
main image on a phone

2 **The menu is a long scroll on a phone**

A shopper who can't spot their category in a few seconds tends to leave. A shorter menu gets more people onto product pages, where buying starts.

102
links in the menu

3 **The homepage is heavy for a phone**

Everything on the page has to come down a phone connection before it settles. A lighter page shows products sooner and uses less of the shopper's data.

8.7–8.9 MB
homepage download

## THE 3 FIXES, IN DETAIL

### 1 The homepage is slow to show its main image

**WHAT WE SAW** On a phone, your homepage took about 11 seconds to show its main image in our test. Google rates anything over 4 seconds as poor. Across two test runs it ranged from 11 to 14 seconds.

**WHAT TO DO** Size the main image for phones and load it first, then go through the 51 outside services that load on the homepage, remove the ones you no longer use and load the rest after the page appears.

| | |
|---|---|
| **11–14 s** main image on a phone | **22–29** Lighthouse speed score, out of 100 |
| **835–842** requests on the homepage | **51** outside services |

### 2 The menu is a long scroll on a phone

**WHAT WE SAW** The main menu has 102 links once the dropdowns open. On a phone, that's a long scroll before anyone reaches a product. We counted the links in the header menu with its dropdowns open, leaving out social icons.

**WHAT TO DO** Keep 5 to 7 top-level items that match how people shop (categories, best sellers, gifts) and move the long lists into collection pages with filters. Keep search one tap away.

| | |
|---|---|
| **102** links in the menu | **2,590** products in the store |

### 3 The homepage is heavy for a phone

**WHAT WE SAW** The homepage downloads about 9 MB on a phone, which is heavy on a mobile connection. In our runs the homepage was 8.7 to 8.9 MB over 835 to 842 requests; images were 1.5 MB of it and scripts 4.4–4.5 MB.

**WHAT TO DO** Resize and compress the images for phones (Lighthouse estimates 0.6 MB saved on images alone), and remove app code the page downloads but doesn't use (about 1.5 MB by Lighthouse's count).

| | |
|---|---|
| **8.7–8.9 MB** homepage download | **1.5 MB** of it images |
| **4.4–4.5 MB** of it scripts | **1.5 MB** of scripts unused |

## What's already working

- **A reviews app on product pages.** Judge.me is installed and shows on the pages we checked.
- **Google's SEO basics.** All 10 Lighthouse SEO checks pass on the homepage.
- **Product data for Google.** Product pages carry schema, so search results can show price and stock.

**How we measured.** Google Lighthouse 12.8.2 in mobile mode (a simulated mid-range phone on slow 4G): two runs on the homepage on November 1, 2026. Menu links counted from the homepage code; chat and reviews checked on the homepage and a product page in Chrome at 390 pixels wide, November 1, 2026; sitemap read November 1, 2026. Load times vary between runs, so we show ranges and score the better run. Speed = Lighthouse performance × 0.25; SEO = Lighthouse SEO × 0.25 minus 1 per leftover page; Menu and Support start at 25 and lose points only for the gaps named above.
