MINI X-RAY

Straight Down

straightdown.com · San Luis Obispo, California. Your store seen the way a shopper sees it on a phone.

Your homepage in our phone test

68/100

Four areas, 25 points each. Support is where the most points are left.

Speed 14/25

Lighthouse speed score 45–55 out of 100 in our two runs; the main image showed after 3.1–4.2 seconds.

SEO 24/25

All 10 of Lighthouse's SEO checks pass on the homepage. Your sitemap also lists one page that looks like test or duplicate leftovers: /pages/ccpa-opt-out-1.

Menu 17/25

53 links once the dropdowns open: a long scroll on a phone.

Support 13/25

No chat or assistant on mobile, so questions wait for an email reply.

The 3 fixes we'd make first

1 The menu is a long scroll on a phone

A shopper who can't spot their category in a few seconds tends to leave. A shorter menu gets more people onto product pages, where buying starts.

53
links in the menu

2 Quick questions have nowhere to go

A question that waits for an email reply is a sale on hold, and many shoppers move on while they wait. An answer in the moment keeps them on the page.

No chat
on the pages we checked

3 The homepage is heavy for a phone

Everything on the page has to come down a phone connection before it settles. A lighter page shows products sooner and uses less of the shopper's data.

THE 3 FIXES, IN DETAIL

1 The menu is a long scroll on a phone

WHAT WE SAW The main menu has 53 links once the dropdowns open. On a phone, that's a long scroll before anyone reaches a product. We counted the links in the header menu with its dropdowns open, leaving out social icons.

WHAT TO DO Keep 5 to 7 top-level items that match how people shop (categories, best sellers, gifts) and move the long lists into collection pages with filters. Keep search one tap away.

53 links in the menu

774 products in the store

2 Quick questions have nowhere to go

WHAT WE SAW We didn't find a chat or assistant on mobile, so a shopper with a quick question about sizing or shipping has to email and wait. We checked the homepage and a product page on a phone-sized screen (390 pixels wide), scrolled to the bottom.

WHAT TO DO Add a chat that answers from your own shipping, returns and product pages, day and night, and passes anything else to your team by email. Start with the questions you already get most.

None chat or assistant on the homepage or product page

3 The homepage is heavy for a phone

WHAT WE SAW The homepage downloads about 7 MB on a phone, which is heavy on a mobile connection. In our runs the homepage was 6.6 MB over 361 requests; images were 2.9 MB of it and scripts 2.0 MB.

WHAT TO DO Resize and compress the images for phones (Lighthouse estimates 2.3 MB saved on images alone), and remove app code the page downloads but doesn't use (about 0.7 MB by Lighthouse's count).

6.6 MB homepage download

2.9 MB of it images

2.0 MB of it scripts

0.7 MB of scripts unused

What's already working

- **Reviews on product pages.** The one we checked shows customer reviews (Loox).
- **Product data for Google.** Product pages carry schema, so search results can show price and stock.
- **Google's SEO basics.** All 10 Lighthouse SEO checks pass on the homepage.
- **A page that holds still.** Layout shift 0.01, under Google's 0.1 limit: nothing jumps under the thumb.

How we measured. Google Lighthouse 12.8.2 in mobile mode (a simulated mid-range phone on slow 4G): two runs on the homepage on November 1, 2026. Menu links counted from the homepage code; chat and reviews checked on the homepage and a product page in Chrome at 390 pixels wide, November 1, 2026; sitemap read November 1, 2026. Load times vary between runs, so we show ranges and score the better run. Speed = Lighthouse performance × 0.25; SEO = Lighthouse SEO × 0.25 minus 1 per leftover page; Menu and Support start at 25 and lose points only for the gaps named above.
