MINI X-RAY

Lady J Jewelry

ladyjjewelry.com · Brooklyn, New York. Your store seen the way a shopper sees it on a phone.

Your homepage in our phone test

70/100

Four areas, 25 points each. Speed is where the most points are left.

Speed — 9/25

Lighthouse speed score 33–36 out of 100 in our two runs; the main image showed after 19 seconds.

SEO — 19/25

7 of 10 Lighthouse SEO checks pass; the homepage has no meta description; some links only say things like “click here”; some links can't be followed by Google.

Menu — 25/25

We couldn't count the menu links automatically, so no points are taken off.

Support — 17/25

Chat (Shopify Inbox) is there for questions, but the product page we checked shows no customer reviews.

The 3 fixes we'd make first

1 The homepage is slow to show its main image

Most shoppers find you on a phone. While the first screen is still loading, some of them tap back to the search results and pick another store.

19 s
main image on a phone

2 Product pages don't show customer reviews

First-time visitors don't know your store yet. Reviews from other buyers are the quickest proof that a product is what it looks like, so fewer people leave to look for that proof elsewhere.

No reviews
on the product page we checked

3 The homepage is heavy for a phone

Everything on the page has to come down a phone connection before it settles. A lighter page shows products sooner and uses less of the shopper's data.

7.0–7.1 MB
homepage download

THE 3 FIXES, IN DETAIL

1 The homepage is slow to show its main image

WHAT WE SAW On a phone, your homepage took about 19 seconds to show its main image in our test. Google rates anything over 4 seconds as poor. It took about 19 seconds in both test runs. The largest thing on the first screen is a slide in a rotating banner.

WHAT TO DO Swap the rotating banner for one image sized for phones and load it first, then go through the 11 outside services that load on the homepage, remove the ones you no longer use and load the rest after the page appears.

19 s main image on a phone	**33–36** Lighthouse speed score, out of 100
420–421 requests on the homepage	**11** outside services

2 Product pages don't show customer reviews

WHAT WE SAW We didn't see customer reviews on your product pages. For a first-time visitor, reviews are the quickest proof. We looked for a review widget, star ratings and review counts on the homepage and a product page after they fully loaded on a phone.

WHAT TO DO Turn on a reviews app, ask recent buyers for a review by email a few days after delivery, and show the star rating next to the price.

None reviews or stars on the product page we checked

3 The homepage is heavy for a phone

WHAT WE SAW The homepage downloads about 7 MB on a phone, most of it images that could be much lighter. In our runs the homepage was 7.0 to 7.1 MB over 420 to 421 requests; images were 4.5 MB of it and scripts 1.3–1.4 MB.

WHAT TO DO Load images below the first screen only when the shopper scrolls to them, and remove app code the page downloads but doesn't use (about 0.5 MB by Lighthouse's count).

7.0–7.1 MB homepage download	**4.5 MB** of it images
1.3–1.4 MB of it scripts	**0.5 MB** of scripts unused

What's already working

- **A chat on mobile.** Shopify Inbox is one tap away on the homepage and product pages.
- **A page that holds still.** Layout shift 0.00–0.08, under Google's 0.1 limit: nothing jumps under the thumb.
- **Alt text on every homepage image.** Good for Google and for screen readers.

How we measured. Google Lighthouse 12.8.2 in mobile mode (a simulated mid-range phone on slow 4G): two runs on the homepage on November 9, 2026. Menu links counted from the homepage code; chat and reviews checked on the homepage and a product page in Chrome at 390 pixels wide, November 9, 2026; sitemap read November 9, 2026. Load times vary between runs, so we show ranges and score the better run. Speed = Lighthouse performance × 0.25; SEO = Lighthouse SEO × 0.25; Menu and Support start at 25 and lose points only for the gaps named above.
