MINI X-RAY

Stones Crystal Shop

stonescrystalshop.com · Scottsdale, Arizona. Your store seen the way a shopper sees it on a phone.

Your homepage in our phone test

58/100

Four areas, 25 points each. Speed is where the most points are left.

Speed 8/25

Lighthouse speed score 27–32 out of 100 in our two runs; the main image showed after 5.3–7.5 seconds.

SEO 23/25

9 of 10 Lighthouse SEO checks pass; the homepage has no meta description.

Menu 14/25

75 links once the dropdowns open: a long scroll on a phone.

Support 13/25

No chat or assistant on mobile, so questions wait for an email reply.

The 3 fixes we'd make first

1 **The homepage is slow to show its main image**

Most shoppers find you on a phone. While the first screen is still loading, some of them tap back to the search results and pick another store.

5.3–7.5 s
main image on a phone

2 **The menu is a long scroll on a phone**

A shopper who can't spot their category in a few seconds tends to leave. A shorter menu gets more people onto product pages, where buying starts.

75
links in the menu

3 **Quick questions have nowhere to go**

A question that waits for an email reply is a sale on hold, and many shoppers move on while they wait. An answer in the moment keeps them on the page.

No chat
on the pages we checked

THE 3 FIXES, IN DETAIL

1 The homepage is slow to show its main image

WHAT WE SAW On a phone, your homepage took about 5 seconds to show its main image in our test. Google rates anything over 4 seconds as poor. Across two test runs it ranged from 5.3 to 7.5 seconds.

WHAT TO DO Size the main image for phones and load it first (today it waits for lazy-loading), then go through the 16 outside services that load on the homepage, remove the ones you no longer use and load the rest after the page appears.

5.3–7.5 s main image on a phone

5.2–5.3 MB homepage download

339–353 requests on the homepage

16 outside services

2 The menu is a long scroll on a phone

WHAT WE SAW The main menu has 75 links once the dropdowns open. On a phone, that's a long scroll before anyone reaches a product. We counted the links in the header menu with its dropdowns open, leaving out social icons.

WHAT TO DO Keep 5 to 7 top-level items that match how people shop (categories, best sellers, gifts) and move the long lists into collection pages with filters. Keep search one tap away.

75 links in the menu

178 products in the store

3 Quick questions have nowhere to go

WHAT WE SAW We didn't find a chat or assistant on mobile, so a shopper with a quick question about shipping or a product has to email and wait. We checked the homepage and a product page on a phone-sized screen (390 pixels wide), scrolled to the bottom.

WHAT TO DO Add a chat that answers from your own shipping, returns and product pages, day and night, and passes anything else to your team by email. Start with the questions you already get most.

None chat or assistant on the homepage or product page

What's already working

- **Reviews on product pages.** The one we checked shows 454 reviews (Judge.me).
- **Alt text on every homepage image.** Good for Google and for screen readers.
- **Product data for Google.** Product pages carry schema, so search results can show price and stock.

How we measured. Google Lighthouse 12.8.2 in mobile mode (a simulated mid-range phone on slow 4G): two runs on the homepage on November 9, 2026. Menu links counted from the homepage code; chat and reviews checked on the homepage and a product page in Chrome at 390 pixels wide, November 9, 2026; sitemap read November 9, 2026. Load times vary between runs, so we show ranges and score the better run. Speed = Lighthouse performance × 0.25; SEO = Lighthouse SEO × 0.25; Menu and Support start at 25 and lose points only for the gaps named above.
