MINI X-RAY

Sweet Furniture

sweetfurniture.com · Columbus, Ohio. Your store seen the way a shopper sees it on a phone.

Your homepage in our phone test

48/100

Four areas, 25 points each. Support is where the most points are left.

Speed — 10/25

Lighthouse speed score 26–38 out of 100 in our three runs; the main content showed after 3.8–16 seconds.

SEO — 22/25

9 of 10 Lighthouse SEO checks pass; some links can't be followed by Google. Your sitemap also lists one page that looks like test or duplicate leftovers: /pages/dreamcloud-1.

Menu — 11/25

100 links once the dropdowns open: a long scroll on a phone.

Support — 5/25

No chat or assistant on mobile, and no customer reviews on the product page we checked.

The 3 fixes we'd make first

1 The menu is a long scroll on a phone

A shopper who can't spot their category in a few seconds tends to leave. A shorter menu gets more people onto product pages, where buying starts.

100
links in the menu

2 Quick questions have nowhere to go

A question that waits for an email reply is a sale on hold, and many shoppers move on while they wait. An answer in the moment keeps them on the page.

No chat
on the pages we checked

3 Product pages don't show customer reviews

First-time visitors don't know your store yet. Reviews from other buyers are the quickest proof that a product is what it looks like, so fewer people leave to look for that proof elsewhere.

No reviews
on the product page we checked

THE 3 FIXES, IN DETAIL

1 The menu is a long scroll on a phone

WHAT WE SAW The main menu has 100 links once the dropdowns open. On a phone, that's a long scroll before anyone reaches a product. We counted the links in the header menu with its dropdowns open, leaving out social icons.

WHAT TO DO Keep 5 to 7 top-level items that match how people shop (categories, best sellers, gifts) and move the long lists into collection pages with filters. Keep search one tap away.

100
links in the menu

15,065
products in the store

2 Quick questions have nowhere to go

WHAT WE SAW We didn't find a chat or assistant on mobile, so a shopper with a quick question about shipping or a product has to email and wait. We checked the homepage and a product page on a phone-sized screen (390 pixels wide), scrolled to the bottom.

WHAT TO DO Add a chat that answers from your own shipping, returns and product pages, day and night, and passes anything else to your team by email. Start with the questions you already get most.

None
chat or assistant on the homepage or product page

3 Product pages don't show customer reviews

WHAT WE SAW We didn't see customer reviews on your product pages. For a first-time visitor, reviews are the quickest proof. We looked for a review widget, star ratings and review counts on the homepage and a product page after they fully loaded on a phone.

WHAT TO DO Turn on a reviews app, ask recent buyers for a review by email a few days after delivery, and show the star rating next to the price.

None
reviews or stars on the product page we checked

What's already working

- **Product data for Google.** Product pages carry schema, so search results can show price and stock.
- **A title and description for Google.** The homepage has both, so search results read well.
- **Alt text on every homepage image.** Good for Google and for screen readers.

How we measured. Google Lighthouse 12.8.2 in mobile mode (a simulated mid-range phone on slow 4G): three runs on the homepage on November 9, 2026. Menu links counted from the homepage code; chat and reviews checked on the homepage and a product page in Chrome at 390 pixels wide, November 9, 2026; sitemap read November 9, 2026. Load times vary between runs, so we show ranges and score the better run. Speed = Lighthouse performance × 0.25; SEO = Lighthouse SEO × 0.25 minus 1 per leftover page; Menu and Support start at 25 and lose points only for the gaps named above.
