MINI X-RAY

The Watch Trader

thewatchtrader.com · Madison, Connecticut. Your store seen the way a shopper sees it on a phone.

Your homepage in our phone test

60/100

Four areas, 25 points each. Support is where the most points are left.

Speed — 10/25

Lighthouse speed score 34–38 out of 100 in our two runs; the main content showed after 16 seconds.

SEO — 20/25

6 of 8 Lighthouse SEO checks pass; the homepage has no meta description; some links can't be followed by Google.

Menu — 25/25

11 links in the menu: short enough to scan on a phone.

Support — 5/25

No chat or assistant on mobile, and no customer reviews on the product page we checked.

The 3 fixes we'd make first

1 The homepage is slow to show its main image

Most shoppers find you on a phone. While the first screen is still loading, some of them tap back to the search results and pick another store.

16 s
main content on a phone

2 Quick questions have nowhere to go

A question that waits for an email reply is a sale on hold, and many shoppers move on while they wait. An answer in the moment keeps them on the page.

No chat
on the pages we checked

3 Product pages don't show customer reviews

First-time visitors don't know your store yet. Reviews from other buyers are the quickest proof that a product is what it looks like, so fewer people leave to look for that proof elsewhere.

No reviews
on the product page we checked

THE 3 FIXES, IN DETAIL

1 The homepage is slow to show its main image

WHAT WE SAW On a phone, your homepage took about 16 seconds to show its main image in our test. Google rates anything over 4 seconds as poor. It took about 16 seconds in both test runs.

WHAT TO DO Make the first screen show its main content before anything else loads, then remove app code the page downloads but doesn't use (Lighthouse counts about 0.3 MB).

16 s
main content on a phone

1.8 MB
homepage download

159–165
requests on the homepage

2 Quick questions have nowhere to go

WHAT WE SAW We didn't find a chat or assistant on mobile, so a shopper with a quick question about shipping or a product has to email and wait. We checked the homepage and a product page on a phone-sized screen (390 pixels wide), scrolled to the bottom.

WHAT TO DO Add a chat that answers from your own shipping, returns and product pages, day and night, and passes anything else to your team by email. Start with the questions you already get most.

None
chat or assistant on the homepage or product page

3 Product pages don't show customer reviews

WHAT WE SAW We didn't see customer reviews on your product pages. For a first-time visitor, reviews are the quickest proof. We looked for a review widget, star ratings and review counts on the homepage and a product page after they fully loaded on a phone.

WHAT TO DO Turn on a reviews app, ask recent buyers for a review by email a few days after delivery, and show the star rating next to the price.

None
reviews or stars on the product page we checked

What's already working

- **A short menu.** 11 links, easy to scan on a phone.
- **A page that holds still.** Layout shift 0.01, under Google's 0.1 limit: nothing jumps under the thumb.

How we measured. Google Lighthouse 12.8.2 in mobile mode (a simulated mid-range phone on slow 4G): two runs on the homepage on November 9, 2026. Menu links counted from the homepage code; chat and reviews checked on the homepage and a product page in Chrome at 390 pixels wide, November 9, 2026; sitemap read November 9, 2026. Load times vary between runs, so we show ranges and score the better run. Speed = Lighthouse performance × 0.25; SEO = Lighthouse SEO × 0.25; Menu and Support start at 25 and lose points only for the gaps named above.
