MINI X-RAY

Big Kitchen

bigkitchen.com · St. Petersburg, Florida. Your store seen the way a shopper sees it on a phone.

Your homepage in our phone test

73/100

Four areas, 25 points each. Menu is where the most points are left.

Speed 14/25

Lighthouse speed score 55 out of 100 in our two runs; the main image showed after 37–38 seconds.

SEO 23/25

9 of 10 Lighthouse SEO checks pass; some links can't be followed by Google.

Menu 11/25

100 links once the dropdowns open: a long scroll on a phone.

Support 25/25

No gaps found: Shopify Inbox chat shows on mobile, and the product page we checked shows no reviews yet.

The 3 fixes we'd make first

1 The homepage is slow to show its main image

Most shoppers find you on a phone. While the first screen is still loading, some of them tap back to the search results and pick another store.

37–38 s
main image on a phone

2 The menu is a long scroll on a phone

A shopper who can't spot their category in a few seconds tends to leave. A shorter menu gets more people onto product pages, where buying starts.

100
links in the menu

3 The homepage is heavy for a phone

Everything on the page has to come down a phone connection before it settles. A lighter page shows products sooner and uses less of the shopper's data.

18.8–19.1 MB
homepage download

THE 3 FIXES, IN DETAIL

1 The homepage is slow to show its main image

WHAT WE SAW On a phone, your homepage took about 37 seconds to show its main image in our test. Google rates anything over 4 seconds as poor. Across two test runs it ranged from 37 to 38 seconds.

WHAT TO DO Size the main image for phones and load it first, then go through the 9 outside services that load on the homepage, remove the ones you no longer use and load the rest after the page appears.

37–38 s main image on a phone	**55** Lighthouse speed score, out of 100
532–593 requests on the homepage	**9** outside services

2 The menu is a long scroll on a phone

WHAT WE SAW The main menu has 100 links once the dropdowns open. On a phone, that's a long scroll before anyone reaches a product. We counted the links in the header menu with its dropdowns open, leaving out social icons.

WHAT TO DO Keep 5 to 7 top-level items that match how people shop (categories, best sellers, gifts) and move the long lists into collection pages with filters. Keep search one tap away.

100 links in the menu	**2,851** products in the store

3 The homepage is heavy for a phone

WHAT WE SAW The homepage downloads about 19 MB on a phone, which is heavy on a mobile connection. In our runs the homepage was 18.8 to 19.1 MB over 532 to 593 requests; images were 2.4–2.5 MB of it and scripts 0.8–0.9 MB.

WHAT TO DO Resize and compress the images for phones (Lighthouse estimates 0.3 MB saved on images alone), and check which of the 9 outside services still earn their place.

18.8–19.1 MB homepage download	**2.4–2.5 MB** of it images
0.8–0.9 MB of it scripts	

What's already working

- **A chat on mobile.** Shopify Inbox is one tap away on the homepage and product pages.
- **Product data for Google.** Product pages carry schema, so search results can show price and stock.
- **Alt text on every homepage image.** Good for Google and for screen readers.
- **A title and description for Google.** The homepage has both, so search results read well.

How we measured. Google Lighthouse 12.8.2 in mobile mode (a simulated mid-range phone on slow 4G): two runs on the homepage on November 1, 2026. Menu links counted from the homepage code; chat and reviews checked on the homepage and a product page in Chrome at 390 pixels wide, November 1, 2026; sitemap read November 1, 2026. Load times vary between runs, so we show ranges and score the better run. Speed = Lighthouse performance × 0.25; SEO = Lighthouse SEO × 0.25; Menu and Support start at 25 and lose points only for the gaps named above.
