MINI X-RAY

# Cleanline Surf

**cleanlinesurf.com** · Seaside, Oregon. Your store seen the way a shopper sees it on a phone.

Your homepage in our phone test

## 54/100

Four areas, 25 points each. Speed is where the most points are left.

**Speed** 0/25

Lighthouse speed score 1–2 out of 100 in our two runs; the main image showed after 16–17 seconds.

**SEO** 21/25

8 of 10 Lighthouse SEO checks pass; some links can't be followed by Google; some images have no alt text.

**Menu** 8/25

241 links once the dropdowns open: a long scroll on a phone.

**Support** 25/25

No gaps found: Gorgias chat shows on mobile, and the product page we checked shows customer reviews.

## The 3 fixes we'd make first

1 **The homepage is slow to show its main image**

Most shoppers find you on a phone. While the first screen is still loading, some of them tap back to the search results and pick another store.

16–17 s
main image on a phone

2 **The menu is a long scroll on a phone**

A shopper who can't spot their category in a few seconds tends to leave. A shorter menu gets more people onto product pages, where buying starts.

241
links in the menu

3 **The homepage is heavy for a phone**

Everything on the page has to come down a phone connection before it settles. A lighter page shows products sooner and uses less of the shopper's data.

9.6–9.8 MB
homepage download

## THE 3 FIXES, IN DETAIL

### 1 The homepage is slow to show its main image

**WHAT WE SAW** On a phone, your homepage took about 16 seconds to show its main image in our test. Google rates anything over 4 seconds as poor. Across two test runs it ranged from 16 to 17 seconds. The largest thing on the first screen is a slide in a rotating banner.

**WHAT TO DO** Swap the rotating banner for one image sized for phones and load it first, then go through the 25 outside services that load on the homepage, remove the ones you no longer use and load the rest after the page appears.

| | |
|---|---|
| **16–17 s** main image on a phone | **1–2** Lighthouse speed score, out of 100 |
| **343–348** requests on the homepage | **25** outside services |

### 2 The menu is a long scroll on a phone

**WHAT WE SAW** The main menu has 241 links once the dropdowns open. On a phone, that's a long scroll before anyone reaches a product. We counted the links in the header menu with its dropdowns open, leaving out social icons.

**WHAT TO DO** Keep 5 to 7 top-level items that match how people shop (categories, best sellers, gifts) and move the long lists into collection pages with filters. Keep search one tap away.

| | |
|---|---|
| **241** links in the menu | **7,352** products in the store |

### 3 The homepage is heavy for a phone

**WHAT WE SAW** The homepage downloads about 10 MB on a phone, most of it images that could be much lighter. In our runs the homepage was 9.6 to 9.8 MB over 343 to 348 requests; images were 5.6 MB of it and scripts 3.2 MB.

**WHAT TO DO** Resize and compress the images for phones (Lighthouse estimates 3.5 MB saved on images alone), and remove app code the page downloads but doesn't use (about 0.8 MB by Lighthouse's count).

| | |
|---|---|
| **9.6–9.8 MB** homepage download | **5.6 MB** of it images |
| **3.2 MB** of it scripts | **0.8 MB** of scripts unused |

## What's already working

- **Reviews on product pages.** The one we checked shows customer reviews (Judge.me).
- **A chat on mobile.** Gorgias is one tap away on the homepage and product pages.
- **Product data for Google.** Product pages carry schema, so search results can show price and stock.
- **A title and description for Google.** The homepage has both, so search results read well.

**How we measured.** Google Lighthouse 12.8.2 in mobile mode (a simulated mid-range phone on slow 4G): two runs on the homepage on November 1, 2026. Menu links counted from the homepage code; chat and reviews checked on the homepage and a product page in Chrome at 390 pixels wide, November 1, 2026; sitemap read November 1, 2026. Load times vary between runs, so we show ranges and score the better run. Speed = Lighthouse performance × 0.25; SEO = Lighthouse SEO × 0.25; Menu and Support start at 25 and lose points only for the gaps named above.
